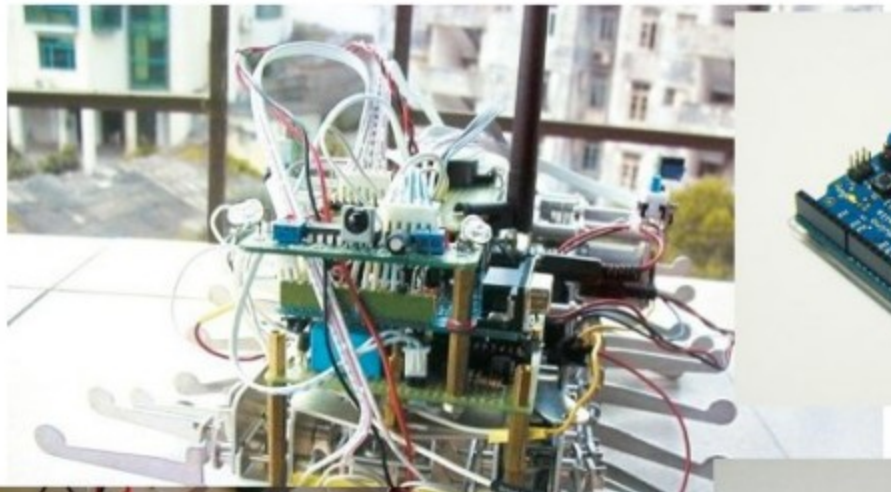
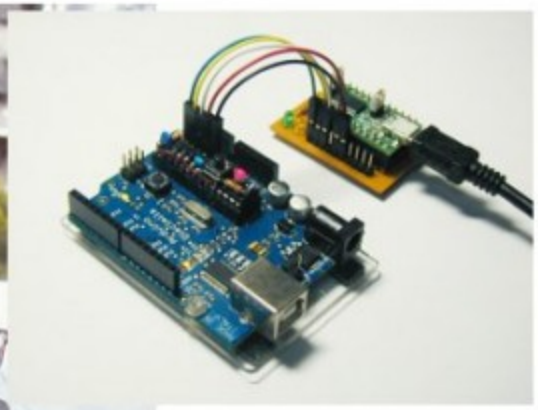
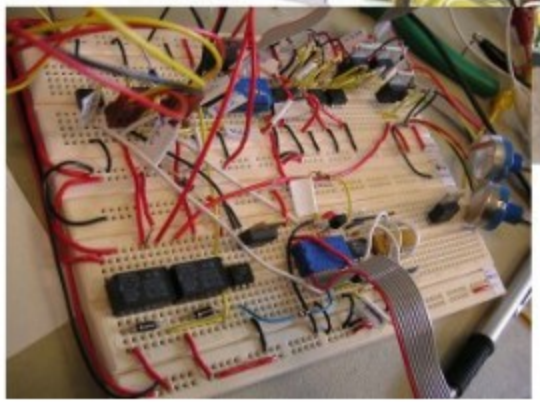
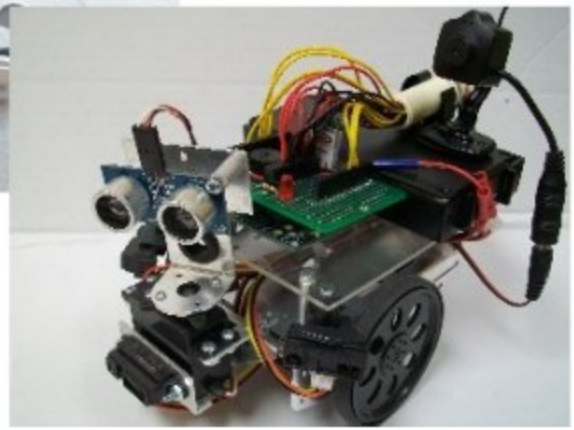
TinkerForge

Electronics can be exhausting







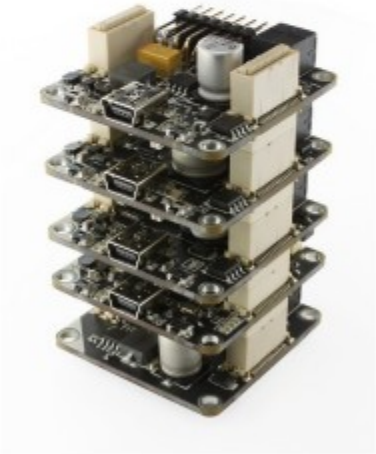


Electronics can be exhausting

The idea of Tinkerforge

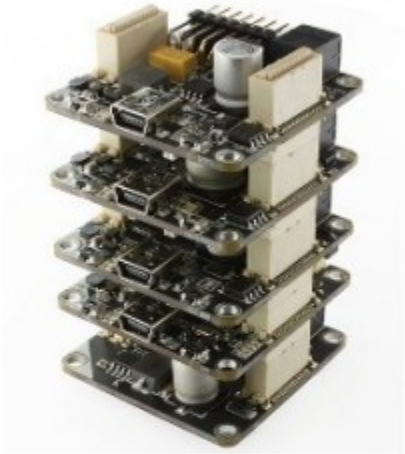
Electronic Building Blocks

- **Flexible Usage**
  - For Every Purpose One Module
- **No Soldering Necessary**
  - Pluggable Modules
- **No Barriers**
  - Use High Level Programming Languages
  - No Electrical Knowledge Necessary
- **Open Source, Open Hardware**
- **Easy And Fast**
  - Powerful API/Examples

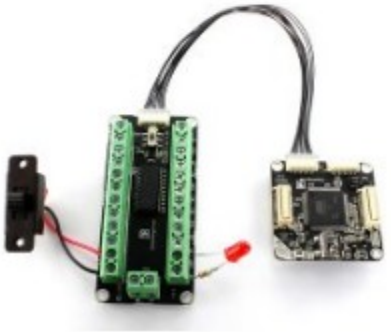


Tinkerforge - Electronic Building Blocks

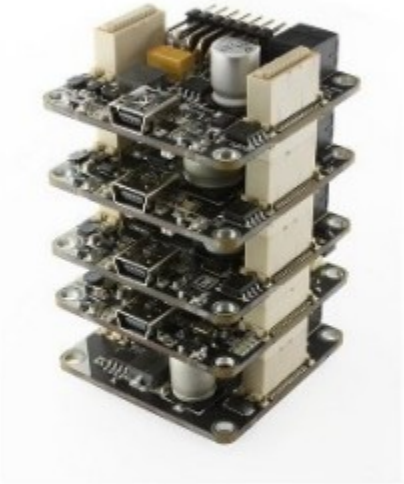
Bricks

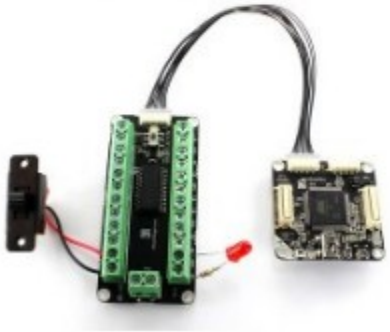


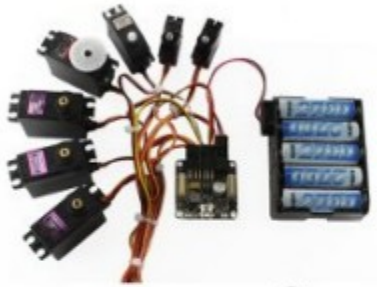
Bricklets



Tinkerforge - Electronic Building Blocks







Tinkerforge - Electronic Building Blocks

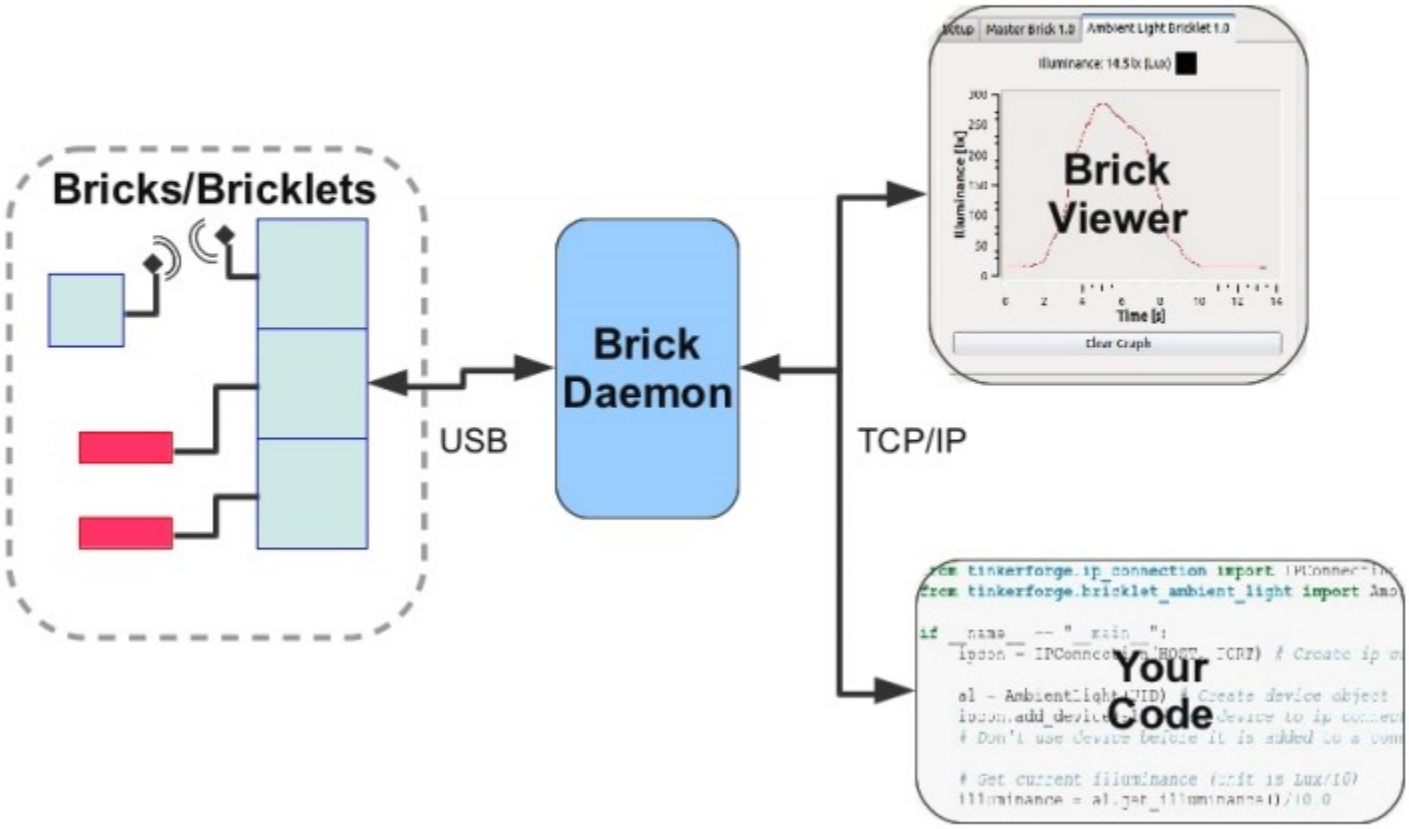
Programming Interfaces

High Level Programming Interface

- **Devices are preprogrammed and controlled by a PC**
- Each device has its own unique ID (UID)
- User code controls device by an API
- Currently support:
  C/C++, C#, Delphi, Java, PHP, Python and Ruby

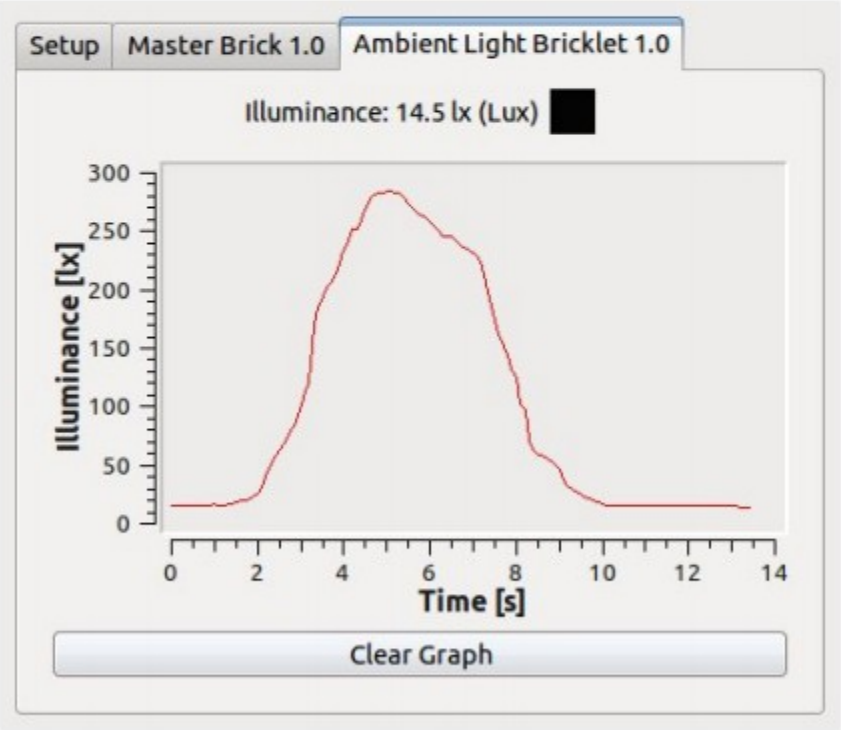
```
stepper = Stepper(UID)
stepper.set_motor_current(800)
stepper.set_max_velocity(2000)
stepper.enable()
stepper.set_steps(60000)
```

System Architecture



Brick Viewer

- Test and Debug Tool
- Configure Wireless Connections



Your Code - Example

```java
import com.tinkerforge.BrickletRotaryPoti;
import com.tinkerforge.IPConnection;

public class ExampleSimple {
    private static final String host = "localhost";
    private static final int port = 4223;
    private static final String UID = "ABC"; // Change to your UID

    // Note: To make the example code cleaner we do not handle exceptions. Exceptions you
    //       might normally want to catch are described in the commnents below
    public static void main(String args[]) throws Exception {
        // Create connection to brickd
        IPConnection ipcon = new IPConnection(host, port); // Can throw IOException
        BrickletRotaryPoti rp = new BrickletRotaryPoti(UID); // Create device object

        // Add device to IP connection
        ipcon.addDevice(rp); // Can throw IPConnection.TimeoutException
        // Don't use device before it is added to a connection

        // Get current position (return value has range -150 to 150)
        short position = rp.getPosition(); // Can throw IPConnection.TimeoutException

        System.out.println("Position: " + position);

        System.console().readLine("Press key to exit\n");
        ipcon.destroy();
    }
}
```

Your Code - Example

```java
import com.tinkerforge.BrickletLCD20x4;
import com.tinkerforge.IPConnection;

public class ExampleHelloWorld {
    private static final String host = "localhost";
    private static final int port = 4223;
    private static final String UID = "ABC"; // Change to your UID

    // Note: To make the example code cleaner we do not handle exceptions. Exceptions you
    //       might normally want to catch are described in the commnents below
    public static void main(String args[]) throws Exception {
        // Create connection to brickd
        IPConnection ipcon = new IPConnection(host, port); // Can throw IOException
        BrickletLCD20x4 lcd = new BrickletLCD20x4(UID); // Create device object

        // Add device to IP connection
        ipcon.addDevice(lcd); // Can throw IPConnection.TimeoutException
        // Don't use device before it is added to a connection

        // Turn backlight on
        lcd.backlightOn();

        // Write "Hello World"
        lcd.writeLine((short)0, (short)0, "Hello World");

        System.console().readLine("Press key to exit\n");
        ipcon.destroy();
    }
}
```

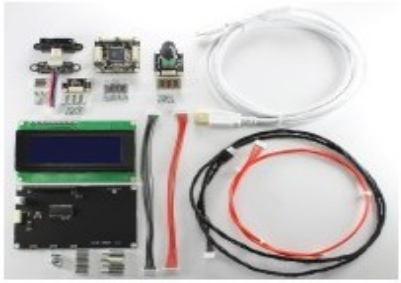
Features

- Starter Kit
- Ideally suited to learn programming
- Ideal to play around with Bricks and Bricklets



Details

This kit is ideally suited for beginners that want to learn a programming language. It is possible to write programs that can sense and interact with the real world, which makes learning a programming language a lot more fun.

For example with this kit it is possible to:

- Control the volume of a PC with the Rotary Poti Bricklet
- Turn the monitor on/off if someone sits down/goes away with the Distance IR Bricklet
- Control the brightness of the Monitor according to the ambient light with the Ambient Light Bricklet
- Show currently played song titles with the LCD 20x4 Bricklet

More Views

There are a vast options!

The Kit is also suited for people that can program but want to learn the handling of Bricks and Bricklets before plunging in a big and expensive project.

More information

Source Code and Bug Tracking

Every product that is released by Tinkerforge is Open Source. The firmware source as well as the hardware design files for all Bricks and Bricklets are available. Additionally the source code for all tools, such as the Brick Daemon, the Brick Viewer and the generators for the language bindings is available.

This means you can use all of the Tinkerforge hardware and software as a starting point for your own project, extend or modify it. Furthermore you can help us in the development effort and most importantly report bugs.

To make it easy for the community to commit patches and report bugs, all of the Tinkerforge projects are hosted on Github.

If you don't know git, you can find information here. Our projects can be cloned with:

```
git clone git://github.com/Tinkerforge/PROJECT.git
```

Below is a list of the Tinkerforge project repositories and corresponding bug tracker.

	Repository	Bug Tracking
Tools		
Brick Daemon	git://github.com/Tinkerforge/brickd.git	Report Bug
Brick Viewer	git://github.com/Tinkerforge/brickv.git	Report Bug
Brick Bootloader	git://github.com/Tinkerforge/brickboot.git	Report Bug
Brick Library	git://github.com/Tinkerforge/bricklib.git	Report Bug
Bricklet Library	git://github.com/Tinkerforge/brickletlib.git	Report Bug
API Generator	git://github.com/Tinkerforge/generators.git	Report Bug

CHIP AWARD 2012 - Product of the Year

written by admin, on Mar 8, 2012 2:25:00 PM.

Yesterday we were at the CeBIT, invited by the CHIP Magazine, to take part at the award ceremony of the CHIP AWARDS. Unexpectetly we were allowed to take the price for “Product of the Year 2012″ home! The Awardees of the “Product of the Year” category in 2011 and 2010 were the major players Lufthansa and Panasonic, now it is Tinkerforge :-).

A video of the award ceremony can be viewed on website of Chip (video is in english).
